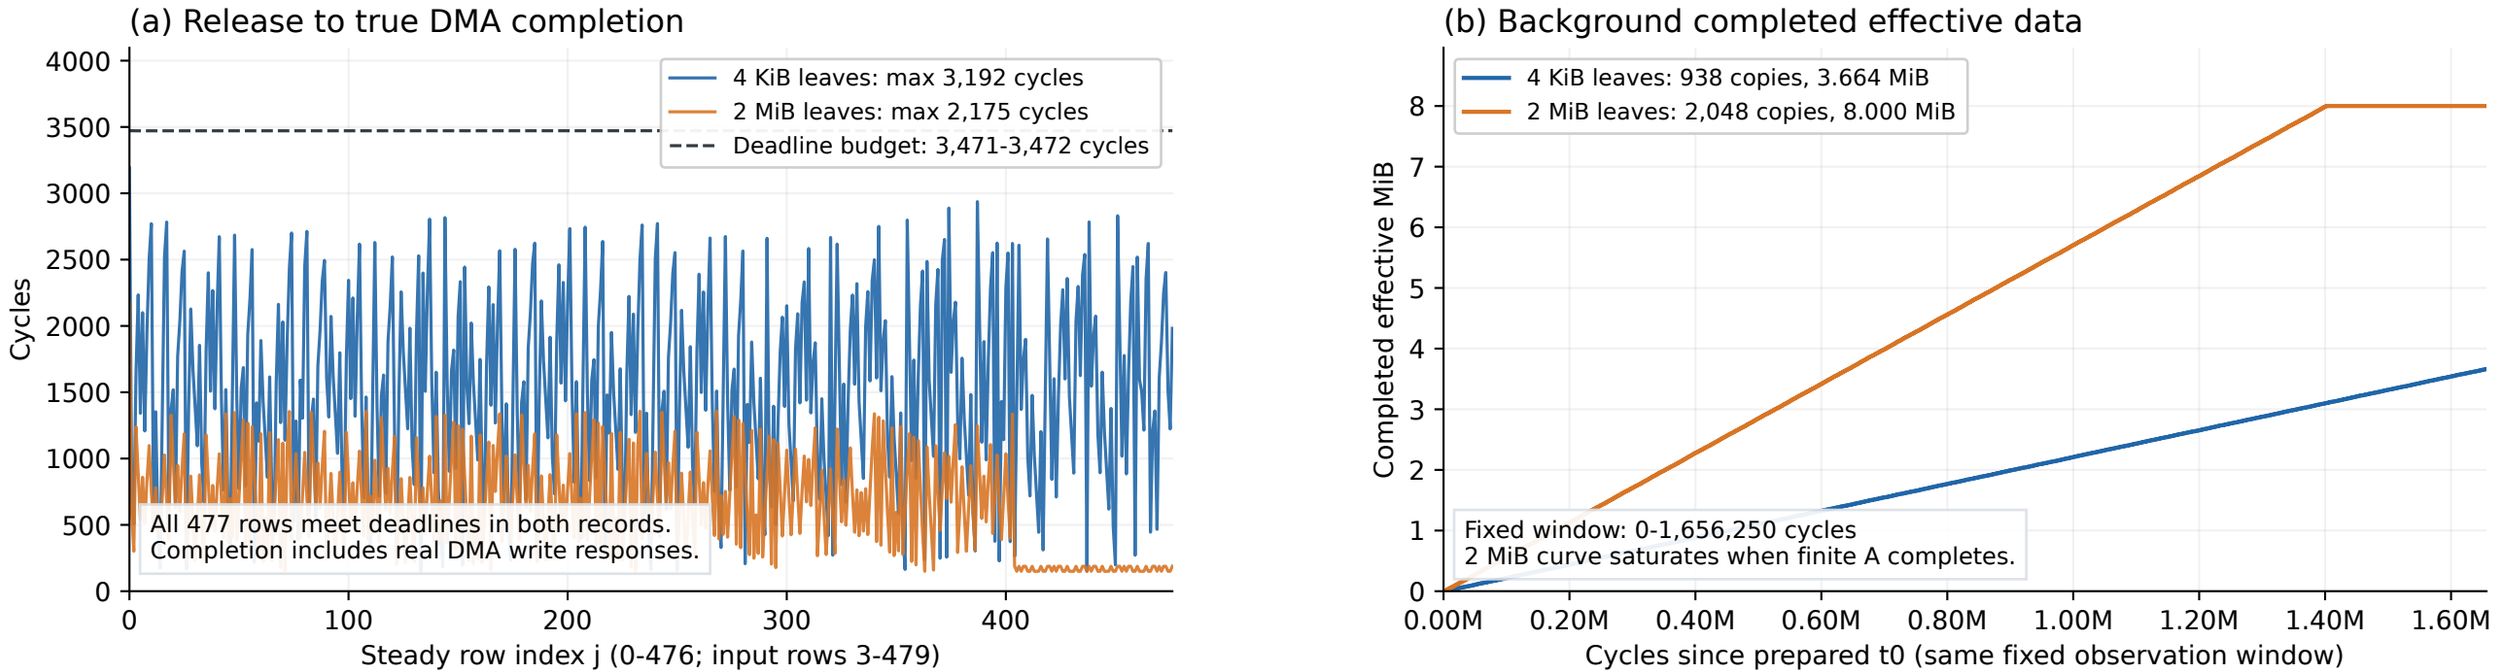
Registered row baseline: 477 steady rows

Deterministic behavioral DDR | fixed P | both CPU off | finite A = 2,048 copies (8 MiB)



Physical reservation: 4 KiB = 442,368 B; 2 MiB = 6,291,456 B (three windows); extra padding = 5,849,088 B.

Initialization (3 actual rows): 4 KiB leaves 1,919 cycles; 2 MiB leaves 1,629 cycles; preparation 65 cycles each; no mode switches/new control.

Reservation is authorized physical capacity, not sparse host RAM. No board, full-frame FPS or innovation claim.
